

# Salmanuddin Talha Mohd

[salman.workday@gmail.com](mailto:salman.workday@gmail.com), [mohd-salmanuddin-talha](#),

## EDUCATION:

**Loyola University Chicago, Illinois, USA**

December 2026

*Master of Science in Software Engineering, **Major:** Software Engineering and Cybersecurity*

3.83/4.0

**Relevant Coursework:** Web Programming II, Intro to Cybersecurity, Cybersecurity with AI, Advanced Database Programming, Intrusion Detection Systems, Open Source Computing, Software Quality and Testing.

**Jawaharlal Nehru Technological University, Hyderabad, India**

August 2022

*Bachelor of Technology in Computer Science Engineering*

3.45/4.0

**Relevant Coursework:** Object Oriented Programming, Cloud Computing, Database Management Systems, Web Development, Data Structures, Network Security, Computer Networks, Machine Learning, Computer Architecture, Probability & Statistics.

## SKILLS:

**Programming Languages:** C/C++, Java, JavaScript, Python

**Cybersecurity:** Intrusion Detection Systems (IDS), Linux, Bash

**Tools & IDEs:** VS Code, IntelliJ IDEA, Firebase, Netlify, PostgreSQL, Wireshark, Snort, Git, GitHub

**Database & Cloud:** MySQL, MongoDB, Azure

**Technologies & Frameworks:** HTML5, CSS3, React.js, Node.js, Bootstrap, Tailwind CSS, Material UI

## EXPERIENCE:

**Graduate Reference Assistant**

Chicago, IL

**Loyola University Chicago | Student Accessibility Center (SAC).**

August 2025 – Present

- Coordinate exam accommodations for 200+ students using Accommodate system to manage scheduling, alternate formats and conflict resolution.
- Oversee daily testing operations including check-in, seating, time tracking, and individualized accommodations (assistive technology, extended time, specialized environments)
- Liaison between students, faculty, and SAC leadership to resolve issues and maintain accessibility compliance for equitable testing environments

**Classroom Technology Assistant**

Chicago, IL

**Loyola University Chicago | Information Technology Services (ITS)**

February 2025 – August 2025

- Diagnosed and resolved 5-10 daily technical issues across software, hardware, and network systems with an average resolution time under 1 hours and 95%+ professor satisfaction rate.
- Provided on-site technical support to 20+ professors daily, ensuring 100% classroom technology uptime and seamless instruction for 50+ students per session.
- Managed 50+ monthly tickets through help desk system with 98% resolution rate while training 3 new team members on troubleshooting protocols and software configuration.

**Software Development Intern**

INDIA

**VegalTech PVT. LTD. | Internship**

January 2024 - July 2024

- Designed & pitched 3+ new features for existing platforms, resulting in 25% reduction in reported bugs and enhanced user experience by 50%.
- Developed scalable web apps using React.js, Tailwind CSS, and Javascript, building prototypes that accelerated UI/UX implementation by 30%.
- Collaborated with cross-functional teams to enhance web features through data-driven recommendations, improving overall performance by 25%.
- Integrated Google Firebase for secure user management and real-time data synchronization across applications.

## ACADEMIC RESEARCH:

**Cybersecurity Graduate Research: Threat Intelligence to Automated Defense**

**Loyola University Chicago**

August 2025 - December 2025

- Analyzed 6,337 authentication events identifying 1,250 attack sources across 50+ countries with 99.5% pattern classification accuracy.
- Recovered 6 credential sets from 10 network protocols through forensics investigation achieving 100% evidence extraction success rate.
- Developed 13 custom Snort IDS signatures achieving 99.5% detection accuracy with 5% false positive rate across multiple attack types.

## PROJECTS:

**AutoLuxe - Full-Stack Car Dealership Platform**

**Tech Stack:** React.js | Node.js | Express.js | Springboot | MongoDB | Vercel | AI API

- Developed full-stack car dealership platform using React.js, Node.js, and MongoDB with optimized database indexing, handling 100+ requests per minute with API response times under 250ms.
- Built responsive React.js frontend implementing lazy loading, code splitting and virtual scrolling that reduced bundle size by 60%.
- Integrated AI chatbot for automated customer inquiries, vehicle information, and appointment booking, reducing manual customer service workload by 60-75%. Also, Implemented CI/CD pipeline with GitHub Actions, authentication and achieved 75%+ code coverage.

**Human Activity Recognition Using CNN and Transfer Learning**

**Tech Stack:** Python | OpenCV | NumPy | Tkinter. | Transfer Learning.

- Developed a ResNet-34 human activity recognition model achieving 96.95% accuracy and 98.2% precision across 5+ activity classes on 0+ video samples.
- Extracted 30 frames per second from video streams using OpenCV with <50ms processing latency for real-time activity detection.
- Built cross-platform Tkinter GUI supporting operating systems with 0.3-second average inference time per video.

**Android Timer**

**Tech Stack:** JAVA | Android SDK | IntelliJ Idea | Gradle | XML.

- Developed an Android timer app by transforming a basic Java stopwatch into a fully functional, user-friendly mobile solution.
- Built scalable mobile application with 95% crash-free rate through clean architecture design
- Engineered timer app managing 100+ concurrent operations with optimized state management.

## CERTIFICATIONS:

- Solved more than 30+ data structures and object-oriented programming solutions on Leet code.
- Participated in the National level Hackathon by representing my bachelor's college at "BRAINWAVES 2K19".
